TUESDAY 3/8/2022: 2PM: INTELLIGENCE SQUARED, U.S. Should We Edit Genes to Make Better Babies?

A genetic disease runs in your family. Your doctor tells you that, should you wish to have a child, that child is likely to also carry the disease. But a new gene-editing technology could change your fate. It could ensure that your baby is healthy. However, critics say gene editing technology will exacerbate inequality, pressure all parents (and nations) into editing their children to stay competitive, and meddle with the most basic aspect of our humanity. Today's program asks: should we use gene editing to make better babies? One Hour

Over the past two years, millions of teenagers around the world have missed out on the rites of passage that generations before them experienced as a matter of course. Add to that their increased levels of anxiety and isolation, and it quickly becomes apparent why the COVID Generation stands apart as a uniquely marked one. This documentary features three teenagers: in Taiwan, Ireland and Kenya. They each recount how the pandemic has altered the course of their lives. One Hour

We also place special emphasis on the following coverage areas: crime, corrections, and the courts; cultural issues; the disabled and disadvantaged; the economy; the environment; health issues; the media; minorities and civil rights issues; politics; religion; women’s issues; and youth.

During this quarter (as in previous quarters), Maine Public Radio has covered every CDC briefing relative to the pandemic and has included important updates from the CDC in all of our daily news coverage. Additionally, during this period, key information relative to new Mainers has been delivered weekly to new Mainer communities online through Maine Public’s Maine Public News Connect project.
