HEALTHY BODY HEALTHY MIND "Diabetes, Obesity and Cardiovascular Risk"

The epidemic of Obesity has lead to rise in Type II diabetes and this has become a major health crisis in the United States. Type II Diabetes is responsible for a number of significant health conditions including kidney disease, lower limb amputation, blindness and cardiovascular disease that can result in heart attacks and strokes. But the good news is that there are ways to prevent type II diabetes in some people, and for those who have already been diagnosed there are ways to keep patients from

developing those potential devastating complications. In this program we'll explore the science of the obesity/diabetes/cardiovascular disease connection. Plus we'll see how newer approaches to treatments, diet plans and exercise routines can help patients better manage their disease.

January 4, 12:30-01:00 a.m.

HEALTHY BODY HEALTHY MIND "Gaucher Disease: A Mysterious Genetic Disorder"

An inherited metabolic disorder known as Gaucher disease was first described by the French physician Philippe Gaucher in 1882. It is the most common of a class of diseases called lysosomal storage diseases. Gaucher disease is characterized by a wide array of symptoms and the severity of the disease ranges from undetectable to lethal. This devastating disease can affect any ethnic group; however the most common form of Gaucher disease is seen in people of eastern European (Ashkenazi) Jewish descent. In this program we will explore the history of this condition and meet patients who talk about their struggles with Gaucher's Disease. We will also highlight the treatments that are offering hope for people living with this mysterious condition.

Plus we'll hear the encouraging news from doctors who believe that MS is very treatable if therapy is started early.

January 8, 12:30-01:00 a.m.

HEALTHY BODY HEALTHY MIND "Living with Migraines"

At some point of our lives, we all seem to get what we feel is a headache or a migraine, but for some migraines can be a debilitating condition that has daily complications. In addition to the pain and discomfort, migraine headaches can keep sufferers up in the middle of the night, making them feel tired and lethargic the next day. A more intense type of headache called "cluster headaches"...sometimes known as suicide headaches because of the withering nature of the pain... are far less common but much more debilitating. In this program we explore the many types of treatments for these headaches...some have been around for a while, and others are fairly new: one class of newer treatments is commonly known as sumatriptans. These medicines have been effective in relieving the symptoms associated with migraines and cluster headaches. But as you'll see, migraine patients often have to search to find the most effective treatment for their particular type of headache. The good news is today patients have newer options and better patient care.
