

KJNP-AM, KJNP-FM, KJHA-FM Online Public File URL
February 17, 2017

We are not able able to put the URL of our web page on the settings page. It comes up with an error due to the ~ in the URL. ~ is not an allowed character on the page.

We tried substituting the hex (%7e) for it and still get the same error.

Contacted the help desk regarding this (Case # 2921566)
They said because the contractor said it can not be done that we can leave it blank.
