They gave us an overview of immunizations. They said immunizations are considered one of the greatest public health achievements in history. There have been significant reductions in the rates of infectious diseases in the United States since the year 1900. Many public health achievements have contributed to this success, including

improved sanitation and the advent of antibiotics. The use of vaccines to prevent diseases has been a key contributor to reducing rates of deaths caused by infectious diseases as well. Immunization programs in the United States during the past century have nearly eliminated many of the vaccine-preventable diseases that were once common. In fact, routine vaccinations have prevented so much disease and averted so many deaths that many people may not even be aware of the devastation that can be caused by vaccine-preventable diseases. Despite the current successes, it is only through ongoing immunization efforts that these diseases will remain under control. The host thanked both guests for the helpful information.
