

Texarkana College has outlined four specific options students can use when attending classes this upcoming school year, whether from home or on-campus.

The flex campus option allows students to decide whether they'd prefer to attend class physically or virtually.

There will be a rotation of students on campus, based on the maximum class occupancy.

THE HANDS ON HYBRID option is mostly for students who are in courses that require more hands-on learning, such as health sciences. The process will give students the opportunity to operate in labs and other practical methods provided in courses, while in small groups, and while following social distancing guidelines.

Most class instruction, however, will be delivered online.

The Online on a Schedule option will be for schedule-oriented students, who want to adhere to a normal, school-day schedule, but prefer to do so remotely.

Students will use Microsoft Teams, a program similar to Zoom, to stream classes and lectures on a specific schedule.

Online Anytime learning is the most flexible of the options, which allows students to work from home at their own pace.

A completely online option, students will not come on campus with this method.

TC's website shows that Dell laptops are available in the bookstore for approximately \$600, which may be purchased using financial aid.

TC's fall semester begins Aug. 19.
