SLC Rent Increase Disproportionate - (aired 4/27/2016 @7pm 1 min 30 seconds) – A new study from the University of Utah shows a double digit rise in the cost of rent in Utah, yet renters are not making much more money. Over the past ten years, rents in Utah have risen 17% in inflation-adjusted dollars while the median income of renters has increased a meager three percent, making renting much less affordable. Consequently, the share of renters with housing cost burdens has grown substantially in the past decade. According to Wood's study, 125,000 people rent in Salt Lake County. Of those, about 20,000 spend more than half their income on rent. Wood and government housing resources say households should ideally budget about 30% of their income towards housing expenses, but that is not always possible.

This story went over some of the new laws and what they meant to the public and how they would change the laws in Utah. One of the laws was a bill requiring abortion doctors to give pain killers to any fetus more than 20 weeks old before an abortion. Opponents said studies showed the fetal brain may not be developed enough to feel pain even though fetuses of 20 weeks flinch when they are poked with a needle. Another bill would extend Medicaid to 16,000 Utahans and when this became law, the state of Utah must apply to the federal government for permission to extend the program on a limited basis. Doctors and Fetal Pain Law (aired 5/10/2016 @7pm, 1:30 minutes) – Some physicians are still in the dark on what the controversial Senate Bill 234 means, and are asking for clarification. Dr. Leah Torres said the bill is unclear in what "administer" means. She asked lawmakers to explain what the bill means, but did not get an answer. Dr. Teresa Durbin consulted with lawmakers and recommended pain and amnesia medication to be administered by fetal injection. There are certain exemptions from this law that Torres said do not make sense. The group is putting up billboards in Utah, Colorado, Nevada and Arizona that criticize the push by Republican state officials to take control of about 30 million acres. They argue that Utah would have to sell off public land or ramp up drilling

and mining to be able to afford the cost of managing the land. Utah legislators say the state would be a better manager. They've set aside \$4.5 million for a potential lawsuit over the issue. Lawmakers say Utah's legal claim to the land lies in the enabling act Congress passed allowing Utah to become a state, but critics dispute that.

The resolution doesn't change any laws, but people still want action against pornography. This story was significant because pornography is a major issue in the country and in the state of Utah. Declaring pornography a public health crisis takes this issue to a more

serious level and it could cause viewers to think more about how they protect their families from pornography.

Diagnosing Heart Failure (aired 4/21/16 @7pm runs 1 minute 15 seconds) - Over 5-million Americans are suffering from heart failure which means the heart is having trouble pumping blood to the rest of the body and working harder than normal. Today, doctors at Intermountain Medical Center Heart Institute have found they're able to diagnose heart failure near the beginning of a hospital visit. This has reduced the amount of time patients have to stay in the hospital, allows doctors to spend more time with their patients, and has led to better overall health for patients.

Medical Marijuana (aired 4/26/2016 @7pm, 1 min 30 seconds) – Two years after Utah clinical trials began, researchers say pharmaceutical grade cannabis is yielding promising results for epilepsy patients. Trials for Epidolex, a liquid, purified form of cannabidiol (CBD) began in 2014, conducted by the University of Utah's Division of Pediatric Neurology. Two years later, medical researchers cite a 40 percent decrease in frequency and severity of epileptic seizures in their early results. About 30 Utahans have participated in the trial, which focuses on young adults and children with epilepsy. Most families reported seizure relief after beginning the trial, with one participant reporting being completely seizure free after using Epidolex.

Intermountain Connect Care (aired 5/5/16 @7pm, runs 1 minute 15 seconds) - You never choose when to get sick. It can happen in the middle of the night or during the weekend. Unfortunately, if it's not during normal office hours it can be difficult to see a healthcare provider right away...until now. Intermountain Connect Care is providing virtual visits and allowing patients to see a provider anytime, anywhere. These visits are done virtually and save time by eliminating the drive to and from an appointment and often times, reducing wait times. It's also affordable. For anyone who wants to use the service there is a \$49 charge.

Dexa Scans (aired 5/12/16 @7pm, runs 1 minute 15 seconds) - Many people refer to BMI and the scale when determining overall health, but the scale doesn't tell the entire story. However, there's a machine that just might. Dexa scans are referred to as the gold standard in body composition testing. Results of the scan break down weight in every region of the body. Not only does it show weight, but it explains how much muscle and fat are in different areas of the body. For many people a baseline test is the first step towards a healthier life. That way they can follow up a few months later and truly see how their body has changed, not just the number on the scale.

TOSH Arthritis Program (aired 5/19/16 @7pm, runs 1 minute 15 seconds) - Grey hair, wrinkles - it's all part of aging. Unfortunately, so is arthritis. Fortunately TOSH has a multi-disciplinary program that's helping reduce the pain caused by arthritis by focusing on exercise. By increasing activity level, patients strengthen their muscles, joints, and improve pain management. The program focuses on staying as healthy as possible for as long as possible. This includes patients preparing for and recovering from joint

replacements.

Mental Health First Aid (aired 5/26/16 @7pm, runs 1 minute 15 seconds) - Knowing CPR or the Heimlich maneuver may save a life, but what if you come in contact with someone suffering a mental or emotional crisis? Would you know what to do? Fortunately, there is now free Mental Health First Aid training. The program provides people with the questions, signs, and what to do when talking to someone suffering with depression. The key is to have an action plan. First, assess the individual. Second, listen nonjudgmentally. Third, give reassurance. Fourth, encourage them to seek professional help. Fifth let them know you'll be supportive of them getting help.

Emergency Readiness of Hospitals (aired 6/2/16 @7pm, runs 1 minute 15 seconds) - In the case of an emergency event, every Intermountain hospital has its own backup of supplies. There is also a second backup supply, ready to use, in each region of the state. There is then the Supply Chain Center that serves as a backup to the backup. The facility is centrally located and has preconfigured emergency kits made for specific types of disaster events. These would likely include events with trauma related injuries or a need to prevent the spread of disease.

Off-Highway Vehicle Safety (aired 6/9/16 @7pm, runs 1 minute 15 seconds) - ATVs and motorcycles are Utah staples when it comes to summer activities. However, the quickest way to end summer fun is by getting hurt. So whether you're riding an ATV, motorcycle, or other off-highway vehicle it's important to gear up before heading out on Utah's trails. This includes a proper helmet that is DOT certified and fits properly. Education is the other key to staying safe. If you don't have a driver's license, those between the ages of 8 and 15 need to be certified. Finally, be smart when you ride. If you're drinking alcohol, that's not the time to hop on a machine.

Dehydration & Summer Heat (aired 6/16/16 @7pm, runs 1 minute 15 seconds) – Summer time means outdoors, sunshine, and of course, hot temperatures. Due to this, it's important to remember to properly fuel your body and keep out for the early signs of dehydration. If you notice early signs such as thirst, dry mouth, and darkened urine, that's when you want to take action and prevent dehydration from getting worse. To do this, drink water while alternating with a sports beverage. This helps replenish the electrolytes you're losing through sweat. If dehydration isn't addressed early, it can have serious health consequences and lead to organ failure. So if you're heading outside remember to drink water before, during, and after your summertime activities.

Horses & Concussions (aired 6/23/16 @7pm, runs 1 minute 15 seconds) - Football has increased the awareness of brain injuries, specifically concussions; however, a different activity may actually be causing more concussions than football. Activities involving horses can lead to concussions both in and out of the saddle. A recent study suggests equestrian accidents are the lead cause of concussions among adults making up about 45% of all concussions. Among high school aged kids the number one cause is football and number two is girls soccer. For older adults, falls are to blame.

Functional Movement Screen (aired 6/30/16 @7pm runs 1 minute 15 seconds) - Do you know how well you move? If not, a functional movement screen can help identify issues with mobility and stability. Mobility and stability are the building blocks of speed, agility, endurance, and strength; imbalances in those areas can hinder the way you move, or worse, cause injury. If something doesn't look right in the screening process, the next step is figuring out what's causing the limitation and doing exercises to help correct the imbalance.

YOUTH AND FAMILY

Breast Milk for Preemie Babies (aired 4/1/16 @7pm, runs 1 minute 15 seconds) - The numerous benefits of breast milk for babies are undeniable. It has the fat, vitamins, minerals, and protein babies need. However, not only is breast milk the gold standard for full-term babies, the benefits it provides for premature newborns is essential. Some preemie babies will need an additional preemie formula added to the breast milk so they can get additional micronutrients. If a premature baby's mother is unable to breastfeed then fortunately there is donated breast milk that can be used.

Improving Fertility (aired 4/8/16 @7pm runs 1 minute 15 seconds) - There are a number of factors that can affect your chances of getting pregnant. For example, getting older also means your fertility will begin to decline. However, there are a few small lifestyle changes couples can make to increase their chances of having a baby. Start by quitting smoking and losing weight. If you don't need to lose weight, take a look at your workout routine. Too much activity can have an effect as well. Start taking prenatal vitamins. Possibly the most important thing for couples is to know the best time to get pregnant. This is during the fertile window which is when a woman is ovulating.

Babysitting Classes (aired 4/15/16 @7pm runs 1 minute 15 seconds) - It can be scary as a parent to leave your child with a babysitter. But thanks to a babysitting class, it can help tame the nerves. Intermountain's McKay-Dee Hospital offers a babysitting class for kids ages 9-15. It teaches soon-to-be sitters, or even older siblings, all of the essentials when it comes to babies and younger children. They learn diapering, feeding, burping, games to play with kids, how to keep them active, and proper foods to feed them. They are also given safety information the sitter can refer back to should a situation come up.

Safe Medications during Pregnancy (aired 4/22/16 @7pm runs 1 minute 15 seconds) - Getting sick while pregnant is stressful enough, not to mention having to worry about whether or not taking medication may be harmful to your baby. For general aches and pains, such as a headache, medical experts recommend taking Tylenol (acetaminophen). It's important to stay away from anti-inflammatory medications while pregnant such as Aspirin, Ibuprofen, and Aleve. These can cause problems with your baby's kidneys and affect the amniotic fluid. For colds, stay away from medicines that contain alcohol, and for allergies, stick with over the counter medications.

CrossFit & Yoga during Pregnancy (aired 4/29/16 @7pm runs 1 minute 15 seconds) - Exercise improves both physical and mental health during pregnancy, but many soon-to-be moms wonder if there are limitations. The answer is yes, but they might not be

what you're thinking. Pregnant women should do something active every single day for 30 minutes. High-intensity workouts such as CrossFit are perfectly safe, especially if it was done prior to pregnancy. That includes lifting weights. If you do yoga, limit the amount of time in supine position (lying on your back). The most important thing to remember is listen to your body. If you get dizzy, have chest pain, or calf swelling talk to your doctor. Avoiding contact sports or sports with the potential of falling is also a good idea.

Sensory Friendly Kids Summer Movies (aired 5/4/16 @7pm runs 1 minute 15 seconds) - Kids summer movies are back this summer at Megaplex Theatres, but there's a new addition. A new auditorium has been added to serve Utah families with special needs. It's a sensory friendly auditorium where the lights are a bit brighter and the sound is turned down just a bit. It also allows those who need to talk, move around, or use electronic devices while watching the movie to do so. The program lasts 10 weeks and is 10 dollars for the entire summer. It will be up to each attending family to decide whether a traditional theater or a sensory friendly one would be more appropriate for their family.

Breastfeeding (aired 5/10/16 @7pm runs 1 minute 15 seconds) - Breast milk is the best possible food for a baby, and it's the preferred choice; but for many new moms, breastfeeding isn't always simple. All Intermountain hospitals provide lactation services to help put you on the right track. A consultant can come by as you're recovering from giving birth and help you one on one. Most of the time it's simple changes like adjusting the position of mom and baby. If mom is able to breastfeed within the first two hours after giving birth, it makes breastfeeding down the road easier for both mom and baby.

Birthfit Postpartum Series (aired 5/11/16 @7pm runs 1 minute 15 seconds) - Many new moms don't know where to start when it comes to rebuilding their bodies after having a baby. Birthfit Salt Lake City has developed a postpartum series for new moms specifically for this reason. It's centered on the four pillars of Birthfit. First, they encourage moms to get chiropractic care to make sure everything is in alignment. Second, comes mindset. The third phase of recovery includes what you put into your body. The final piece involves getting up and getting moving again.

Summer Safety for Kids (aired 5/18/16 @7pm runs 1 minute 15 seconds) - Summer is right around the corner which means safety should be on the mind of every parent. Accidents often happen close to home. With kids outside, it's the responsibility of the entire neighborhood to keep residential roads safe. Since cars are not always aware of kids, children need to be aware of them. With summer comes bikes, scooters, and now hover boards which means kids need to dust off that helmet. Lastly, brush up on water safety. Drowning happens quickly and it's usually silent. While you may not be able to prevent every accident, taking precautions can help stop most of them.

Infant Colic (aired 5/27/16 @7pm runs 1 minute 15 seconds) - Some babies cry more than others, and it often feels like it will never end. The endless tears may mean your child has colic. For babies struggling with colic, the crying usually begins around a few weeks old and can last up to three, even six months of age. Colic is defined as crying

for three hours, three days a week, for at least three weeks straight. It usually happens around the same time every day, often in the late afternoon or evening. Doctors aren't sure what causes it. Parents can try changing up feeding and for breastfeeding mothers, the food mom is eating can have an effect too. If that doesn't help focus on soothing your baby, and no matter what, don't take out your anger and frustration on the child.

Birth Plans (aired 6/3/16 @7pm runs 1 minute 15 seconds) - Before giving birth, expecting mothers should make their labor and delivery preferences known. To do this, sit down with your provider and create a birth plan. Having a birth plan helps guide your medical team through the labor and delivery process. Items to consider beforehand include questions like, how do you plan to control pain? Do you want an epidural or are you planning on using meditation? It's important to let them know early on so an anesthesiologist can be in place if needed. Not only should you talk about how you want to labor, but it's also a good idea to talk about what you would like to take place post-delivery. Communicating these preferences both verbally and writing them down helps get your message across regardless of who is providing your care.

Newborn Screenings (aired 6/10/16 @7pm runs 1 minute 15 seconds) - Newborns in Utah undergo screening tests shortly after birth. These help identify serious or life-threatening conditions that may not be apparent at birth. Utah's newborn screening process consists of three, potentially life-saving, tests. These tests are the critical congenital heart screening, the hearing screening, and the heel stick blood spot test. All three tests are done to ensure newborn babies receive the care they need, as soon as possible. Early intervention with these kinds of disorders are key to preventing long term problems and disabilities.

Postnatal Yoga (aired 6/17/16 @7pm runs 1 minute 15 seconds) - For new mothers, figuring out a way to exercise can be challenging in more ways than one. A new mom is experiencing so many changes physically, emotionally, and logistically in her life. For one group of moms, the convenience of a postnatal yoga class is just the thing. They are able to participate in a yoga practice designed specifically for their bodies without having to worry about leaving their little one at home.

High-Risk Pregnancy (aired 6/24/16 @7pm runs 1 minute 15 seconds) - Pregnancy is an exciting time, but it can also be scary. Something a pregnant woman is afraid of hearing are the words "high-risk;" but what exactly does that mean? A high-risk pregnancy is anything that increases the risk to the baby or mother's health. The most common form of high-risk pregnancy relates to the mother's health prior to getting pregnant. Conditions such as high blood pressure, obesity, diabetes, or pulmonary problems are the most common ones that can lead to complication during pregnancy. Some women believe certain conditions such as advanced maternal age or complications with a prior pregnancy automatically puts them in the high-risk category and that's not necessarily the case. It's important to talk to your provider about any concerns you might have.
