The summer is on track to be one of the hottest on record, and the rising temperatures are affecting workers across industries like farming, construction, delivery, and even the military. As the effects of climate change worsen, employers and the government will have to re-examine the protections for workers vulnerable to heat-related illness and injury. The Takeaway looks at what regulations, if any, are already in place for workers and what needs to change to improve worker safety.

8/26/19 - 1:21:00p 7:58 **264:30**

California farming continues to deal with the impacts of a long drought, climate change, and fires, farmworkers are increasingly heading to the Pacific Northwest to find work. This has changed the face of farming in Washington, where workers are finding more robust organizing efforts -- which are often oriented around climate justice. Many of the workers unionizing farm laborers in the state of Washington have a climate justice-driven approach. The impact of climate change is affecting them in a dramatic way -- berries not in-season are ripening, conflicting with in-season berries.

8/28/19 - 1:21:00p 7:58 **272:28**

Various civil rights groups have launched a campaign against the Trump administration's proposed rule changes to the Fair Housing Act from earlier this month. The rule change would make it impossible for people to sue under the Fair Housing Act if their loan was denied because of an algorithm. At the same time, regulators are loosening restrictions on the use of computer models to appraise houses.

8/29/19 - 1:30:00p 4:30 **276:58**

45 years ago, in the Supreme Court case *Milliken v. Bradley*, the justices ruled that desegregation plans could not leapfrog school-district borders. That means the federal government could shuffle children between schools in the same district. This decision undermined the *Brown v. Board* ruling 20 years prior and allowed for sustained segregation. Micro-districting, white flight and a funding model based on property tax has led to huge disparities in school funding along largely racial lines.

Coming up on The Takeaway... Long viewed as the most powerful gun lobby in the world, the NRA has been facing internal and external battles over its operations and spending habits. Law enforcement authorities have launched probes that threaten its non-profit status and there has been a revolt among some of its members who question how donations are being spent, some vowing to pull back contributions until changes are made. Given all that, why are politicians still afraid to take on this lobby?

9/4/19 - 1:21:00p 7:58 **303:26**

While recent mass shootings have once again cast a renewed focus on gun violence across the US, in St. Louis, at least 12 children have been killed by gunfire since April. The killings, which have gone mostly unsolved, have raised questions about law enforcement's abilities to seek justice in communities of color. The Takeaway has the latest details, next.

We take a break from our usual way of doing things, and take listeners on a 40-minute, 1,000-mile journey down the Mississippi. Why take a tour of a domestic river on a show that focuses on international news? The Mississippi River is a critical trade corridor that delivers US goods and commodities to the rest of the world and brings goods into the US from abroad. But up and down the Mississippi, new pressures are being put on America's inland hydro-highway, a strain that's only becoming more acute with the impacts of climate change. The World's Jason Margolis recently traveled down large swaths of the Mississippi River to bring us this story.

9/3/19 - 2:32:30p 15:50 **192:00**

After the great Mississippi River flood of 1927, the US Army Corps of Engineers ramped up its efforts to contain the lower Mississippi. They built higher and deeper levees, along with flood control structures and spillways to relieve stress during high water events — it was one the most ambitious engineering projects on earth. And it largely worked, protecting river cities and keeping trade flowing. But with climate change, many people along the river worry how much longer the intricate system can hold. The World's Jason Margolis continues our special coverage of the Mississippi at a crossroads.

The Mississippi River is a place of competing interests. It's a trade superhighway for much of the country and the world, but it's also a ticking environmental time bomb, one that many say has already exploded. But try to fix that, tip the balance in favor of the environment too much, and you could put trade at risk. A solution won't be easy. But as *The World's* Jason Margolis tells us, environmentalists and business interests are working together to tackle the problems along the river.
