1/21/2024	2:30	303	According to the U.N., most of us live in cities rather than rural regions. The switchover arrived in 2007. Which brings up the rural night's main illumination – the Moon. We now know that lunar brightness doubles 2.5 days before Full Moon, which is a big deal if you need a little extra light to complete outdoor rural work. After all, a Half Moon is only a tenth as bright as a Full Moon, not enough to be fully useful.
1/28/2024	2:30	304	Do you still keep your old binoculars in the same drawer as your socks? And are you psyched to glimpse the green planet Uranus?
2/4/2024	2:30	305	Radiation penetrates our bodies 24/7. Most is natural, with background cosmic ray doses proportional to your home's elevation. People in Denver get 80 millirems yearly.
2/11/2024	2:30	306	It'll soon be Valentine's Day, so what makes a great romantic gift? A book of poetry? A candlelight dinner? Excellent choices — but as a nightcap, there's nothing like a moonlight or starlit stroll. So if it's a very late date or if you and your beloved wake up just as morning twilight begins and gaze out an east facing window, the Morning Star will be totally, absolutely riveting, although very low. And look at that little orange star next to it — that's Mars, as if the male and female aspects of the heavens are dancing.
2/18/2024	2:30	307	Statistically, the year's coldest week is now nearly a month behind us. But it's still darn cold, which, in this world full of gray areas, reminds us of a single absolute we can count on. That take-it-to-the-bank certainty is absolute zero. Hear what weird things occurred when temperatures drop too low.
2/25/2024	2:30	308	Now that it's just six weeks before the great total solar eclipse on April 8, many are planning where they'll be, within the 150-mile-wide path of totality. Going online shows the eclipse path, and you must simply make sure you don't pick a spot near the edge of that ribbon, where the eclipse's length will be short. Tune in to hear the best eclipse viewing spots!
3/3/2024	2:30	309	Right now we're seeing the waning moon, the moon lit up on its left side. When you notice a moon in the blue sky in the morning, that's always the waning moon. And speaking of day sky, though it surprises a lot of people, the moon appears in the daytime just as much as it's out at night. Tune in to see where the moon is located in the sky.
3/10/2024	2:30	310	Now that the film "Oppenheimer" has earned awards, more people than ever are aware of the intense atmospheric nuclear bomb testing in the 1950's.

3/31/2024	2:30	313	A few weeks ago came the puzzling discovery of a huge, fully formed galaxy at the edges of the observable universe.
