

Charter will terminate the fiber-optic cable on a patch panel at an agreed upon Minimum Point of Penetration (MPOP) 50 (fifty) feet within each facility. If the Customer's computer closet exceeds this distance, the Customer may be responsible for any additional costs that may be incurred for internal wiring.

The basic Data Transport Service that the Customer will receive includes a Other Mbps private, point-to-point connection between each of the sites as identified in the Service Order(s).

Customer Provided:

The Customer will make available to Charter a building ground connection at each location that meets current electrical codes for the placement of a fiber-optic patch panel. It is recommended that the Customer provide a separate 20 Amp 110V AC circuit for the edge electronics that is powered by a UPS system. Customer-supplied routing will be necessary for communication between each site.

Customer Contact Information. To facilitate communication the following information is provided as a convenience and may be updated at any time without affecting the enforceability of the terms and conditions herein:
