

Think about the technology in our homes. Our cars are pockets devices from phones to computers. We're always watching... smart speakers to TVs. Even kitchen, appliances with cameras or microphones. We're always listening.... it's really creepy. We see what you do. We hear what you say ... even worse? The American big tech companies that control all these devices companies like Amazon, Apple and Microsoft are partnering with shady foreign companies that are known to abuse human rights and steals sensitive data.

American big tech is even sharing advanced artificial intelligence with the Chinese communist Party. Helping them build a surveillance state to oppress their own people and potentially infiltrate our homes. Yikes, we need all our candidates for president to sign the pledge. Stop American big tech from continuing to collude with China before it's too late.
