What caused such dramatic changes at the ends of the Earth? And what controls the dial on Earth's thermostat? Today, the Arctic is warming faster than anywhere else in the world, and Antarctica has locked in its ice enough water to raise sea level by a terrifying 200 feet. The way that the poles respond to a warming climate is one of the greatest wildcards in predicting our climate future. Johnson uses Earth's history, written in stone, as a cipher to decode what is going on at our polar extremes today, and what the future may hold.
