Guest: Alison Kung, Head of Ancestry Product at 23andMe. As more people turn to DNA kits and testing, it has become apparent that underrepresented populations are still being glanced over. To help combat this, 23andMe is announcing several major updates this month - including a more granular breakdown of underrepresented populations (especially in South Asia, Western Asia, Central Asia, and North Africa) and an updated region count from 1000+ to 1500+ regions. Additionally, they are unveiling the 23andMe Family Tree. Despite high awareness and interest in family trees, very few people actually take the time to play an active role in developing their own tree - the 23andMe Family Tree leverages a newly created algorithm to auto-populate a family tree for consumers."
