## **VIEWPOINTS**

### **4-01-18 PART 1: A Spy in the Civil Rights Movement**

**The Civil Rights Movement was a momentous period in the history of the United States. Iconic photos of Dr. Martin Luther King Jr., the Emmett Till Trial, and many other important events that occurred during the movement cover pages of history textbooks and articles honoring their work in changing the country.**

But, who took these famous photos? The photographer was a man named Ernest Withers who learned how to take photos during his time serving the army in World War II. While many of Withers' photos are widely circulated and well known for their effectiveness in rallying people to join the Civil Rights Movement, there is an aspect of his life that has been less popularized over the years. Marc Perrusquia, author of *A Spy in Canaan: How the FBI Used a Famous Photographer to Infiltrate the Civil Rights Movement*, explains that Withers was recruited during this time to be a spy for the FBI. Perrusquia states that he was an appealing recruit for the FBI due to his outgoing personality, photography skills, involvement in the community, and time spent in the military and the police force. Despite working in favor of the Civil Rights Movement, Withers helped the FBI to identify and keep track of a number of individuals that they believed were being influenced by Communist beliefs, some of which were very involved with the movement. While his work for President Hoover and the FBI who thought that the leaders of the Civil Rights Movements were dangerous can be seen as controversial in accordance with his other work, Perrusquia explains that he does not believe that Withers' work for the Civil Rights Movement should be viewed as any less important. In order to learn more about the history of the Civil Rights Movement and Ernest Withers involvement, listen to author Marc Perrusquia as he joins us on this week's show. For more information, purchase a copy of his book *A Spy in Canaan: How the FBI Used a Famous Photographer to Infiltrate the Civil Rights Movement*.

### **04-01-18 PART 2: Practicing Kindness**

Everyday, the news seems to present us with more and more bad news which can be discouraging, and often affect our outlook on the world. But, these daily occurrences do not have to influence us as much as they do. Tara Cousineau, clinical psychologist and author of *The Kindness Cure: How the Science of Compassion Can Heal Your Heart and Your World*, explains that if people can learn to counteract the predisposed negativity around them by being more thoughtful and less judgmental, they may experience more kindness in their lives. Yet, many people have a difficult time doing this because it is often difficult to unlearn behaviors.

However, there is hope for people who are willing to practice being more kind. Cousineau explains a tool she calls "kindfulness," which people can use to fight back against the abundance of negativity in the world. Kindfulness involves an individual learning how to accept the world around them, practice controlling their stress response, and pausing life. She also explains the importance of being kind toward oneself because that can influence a person to have more positive interactions with others. Many of Cousineau's techniques focus on being more attentive to the positive events rather than the negative ones.

In order to learn more about bringing kindness to the world, listen to Cousineau on this week's episode and check out her book, *The Kindness Cure: How the Science of Compassion Can Heal Your Heart and Your World*.

## 4-08-18 PART 1: Religious Strife and Refugees: The 1947 Partition of India

The partition of India in 1947 is a historical event that often goes untold, despite being one of the largest mass migrations in the world. But, author Veera Hiranandani feels that it is important to talk about this time in history more now than ever. The author, whose book *The Night Diary* details the story of a young girl who lives in the midst of the partition of India, explains that this important event in history is losing the opportunity to be told by the people who experienced it because many of the people who were children during the partition are in their 80s and older. With this in mind, Hiranandani set out to write a book that focused on aspects of the partition of India that many people are unaware of.

Throughout the course of the novel, this event is told through the eyes of a 12 year-old girl which was done purposefully in order to convey a few points. Hiranandani wanted to honor the pain experienced from the amount of violence at this time without focusing on it too much due to the intended audience of her book. Another important point brought up by Hiranandani in *The Night Diary* was the division of religious beliefs at the time. She explains that these prominent divisions make it difficult for people to understand and overcome these differences. Finally, she wanted to address how the events of this history are still relatable today. The novel works to humanize refugees by depicting the character as typical 12 year-old that is worried about average everyday experiences. Hiranandani explains that she does this in order to help people look at the refugee as a young girl instead of othering her. In order to learn more about the partition of India, listen to this weeks show and pick up a copy of Hiranandani's book, *The Night Diary*.

## 04-08-18 PART 2 – FINDING INSPIRATION IN OUR COMMUNITIES

Have you ever been conned by a con artist? Chances are you probably do not know. That is why so many con men are able to get away with their scams because people simply do not know that they are being deceived. Maria Konnikova, psychologist and author of *The Confidence Game: Why We Fall For It...Every Time*, explains that con artists are often hard to recognize because they are charismatic people who come off as just being really friendly. Yet, this is far from the truth for many con artists.

When it comes to personalities, many con men seem to have a few similar traits. These traits are categorized as the dark triad of traits—psychopathy, narcissism, and machiavellianism. Konnikova explains that a con artist often has at least one of them, but sometimes, they may have all three. If an individual is psychopathic, they lack empathy, which makes them incapable of feeling remorse. The second trait, narcissism, forces a person to believe that they are more important to the world around them than they really are. And the final trait, machiavellianism, is the ability to persuade someone into doing something that they usually would not do, but making them believe that they are doing it willfully. If a con artist possesses at least one, if not all three, of these traits, then they are highly likely to be successful at conning someone.

Not only do con artists often possess certain personality traits, they usually have a plan that they follow. Konnikova states that there are three steps that con artists use to help them understand the person they are scamming in order to learn how to deceive them. The first step is called the put out which is when the con artist figures out what the person's weaknesses are. Konnikova explains that this psychological profile is the most important step because it tells the con artist how they will be able to sell the person on the scam. In the next step, the con artist uses their storytelling skills to get the person to become emotionally involved which affects their ability to perceive any red flags that would indicate that they might be being scammed. The final step of the con artist's plan, explains Konnikova, is to make the pitch which is when they ask for the thing they want, such as money. While many think it would be easy to identify when a con artist is at work, it is actually a lot more difficult because the con artist embodies aspects of the dark triad and knows how to use them within this plan.

Why are these con artists so successful? Konnikova explains that people tend to be persuaded by con artists because they want to remain consistent with their beliefs, so they will rationalize the situation even if it does appear to be a scam. Furthermore, research has shown that people are more likely to be deceived by a scam if they are at a point of vulnerability in their life. Even if the transaction with the con artist falls through, the mark will continue to rationalize the situation by convincing themselves it is simply a matter of bad luck. Since people who get conned tend to believe it was just bad luck, Konnikova states that very few con artists get reported, and those that do are often able to talk

themselves out of charges, or at least minimize them. Since con artists are rarely reported, many are able to just continue conning people.

## 04-15-18 PART 1: THE Overblown importance of what college you attend

Today, more than ever, there is an immense amount of pressure put on high school students to attend either an Ivy League or another elite college. When students are not accepted to these kinds of colleges, it is devastating and they often feel that their success in life will be impacted tremendously.

Frank Bruni, columnist for *The New York Times* and author of *Where You Go Is Not Who You'll Be: An Antidote to the College Admissions Mania*, explains that this idea is just a myth that is perpetuated by the media. He states that if a politician or CEO attended an Ivy League or another elite college, the media will articulate this fact continuously throughout the profile. However, if they attended a smaller college or a state school, this detail is often excluded entirely. By only talking about a limited number of schools in the media, it reinforces the idea that only those who attend those schools will be successful in their future. Another idea that maintains the pretentious importance about the college that a student attends is the belief that people who have important jobs will only hire people who attended the same college as them. Bruni explains that this does happen, but that this should not deter a student from looking into other schools, as well.

However, Bruni does not think that students should completely avoid applying to Ivy League schools or elite schools. He explains that students should not solely rely on them, nor should they be upset if they do not get accepted because schools choose incoming freshman who meet their current needs, whether that is to fulfill a sports team, maintain alumni relations, or increase access to minorities. Furthermore, Joshua Steckel, a counselor at a New York high school and co-author of *Hold Fast to Dreams*, explains that there are even pitfalls to attending elite colleges if they are not a good fit for the student. These include day-to-day challenges, meeting financial obligations, and, for students of color or low-income students, being excluded by their peers. In order to ensure that a student attends a college that is suitable for their needs, it is important they learn about other options besides Ivy Leagues and elite colleges.

But, in order to encourage students to apply to smaller schools or schools that are not well-known, they need access to the resources to help them find these schools. Steckel explains that access to high school counselors is extremely limited—some schools have 1,000 students assigned to one counselor. Furthermore, he states that a lot of colleges have committed to accepting more low-income students and students of color, but these schools tend to not be well-known. So, many students would benefit from having a counselor to help guide them in finding these schools and through the college application process. But, Bruni explains that no matter what college a student attends, the results of their experience will be based on if they make the most of what the school has to offer. More privileged communities focus too much on getting students into top schools, rather than learning how to make the most of it. Students have the ability to thrive at any school and become successful after graduation, whether they attend an Ivy League or a state school, but what matters most is that they are taught how to.

## 04-15-18 PART 2: OUR UNCONSCIOUS MINDS

Controversial politicians are nothing new in American politics, but the recent election of Donald Trump proved just how influential high-conflict politicians can be on the public. However, many people wonder what makes these high-conflict individuals so appealing, and how they manage to argue their way into powerful positions. We talk to two experts about how high-conflict politicians become so successful.

Bill Eddy, president of the High Conflict Institute and author of *Trump Bubbles: The Dramatic Rise and Fall of High-Conflict Politicians*, explains that a high-conflict person (HCP) is an individual that exhibits a repetitive narrow pattern of behavior, an all-or-nothing attitude, and intense emotions that easily distract them from being focused on problem solving. Many of their patterns of behavior become predictable, but Eddy states high-conflict individuals must first do something damaging before people realize. Yet, these high-conflict people still tend to attract an audience. He explains that high-conflict people are appealing in times of turmoil because they are able to make situations look simple. Furthermore, Eddy explains two other influencing factors in their success: the system of communication between a high-conflict person and the public, and that individuals ability to manipulate this system.

Through understanding these different factors, high-conflict people are capable of gaining a following that allows them to become successful.

Another way that high-conflict people are able to appeal to a large audience and increase their opportunity for success is through emotion. Lauren A. Wright, PhD, political scientist and author of *On Behalf of the President: Presidential Spouses and White House Communications Strategy Today*, explains that studies have shown that being able to observe a person's facial expressions, rather than just hearing the person speak, can influence people to be more inclined toward that person. Because of this, television and other visual media play a very important role in the public's perception of a person.

How does this provide an advantage to politicians? This unconscious absorption of expression allows high-conflict politicians to easily spread their anger to their followers, while also establishing a loving relationship with them even though they have never met. However, when handling situations with a high-conflict person, Eddy explains that it is important to use E.A.R. statements. These statements rely on empathy, attention, and respect which can calm someone with a high-conflict personality because it shows them that you are aware that they are working hard and that you appreciate the work that they have done.

## 5-20-18 Part 1: Financial Corruption and the Fed's Pursuit of SAC Capital

While the world of Wall Street may seem far away to most, Sheelah Kolhatkar, former hedge fund analyst and author of *Black Edge: Inside information, dirty money and the quest to bring down the most wanted man on Wall Street*, says that it is closer to our lives than you may think. Her nonfiction book traces the story of the FBI and Department of Justice's recent investigation of Steve Cohen and his company SAC Capital for insider trading.

Following the story from the beginning, Kolhatkar explains how one of Wall Street's most influential men, who came from a middle-class background and rose to enormous self-made wealth, may have been involved with the insider trading in hedge funds that is rampant on Wall Street today. While many put a portion of their retirement money into stocks, they don't realize that there is often an uneven playing field with the wealthy insiders having their own rules and market.

The FBI cracked down on this crime using wiretaps and informants and arrested two of Cohen's employees at SAC Capital. Cohen himself escaped indictment, but his company agreed to plead guilty to insider trading charges and submit to various restrictions from the government. Kolhatkar encourages readers to be mindful of potential corruption on Wall Street and how it could be affecting your personal finances.

To learn more about financial corruption and the SAC Capital investigation, visit the link below or purchase a copy of Kolhatkar's book.

#### 6-10-18 Part 2: Weather : Past and Future

While weather is often a day-to-day occurrence for many of us, the history of the earth's climate and humanity's relationship to it actually creates a fascinating story. Andrew Revkin, weather expert and historian, summarizes 100 key moments of this chronology in his book *Weather: An Illustrated History From Cloud Atlases to Climate Change*. The book gives short introductions to big scientific concepts, starting with the distinction between weather and climate. Revkin quotes, climate is what you expect, and weather is what you get. Going back all the way to the beginning of the earth's atmosphere 4.6 billion years ago, Revkin tracks the changes in climate since then and several of the atmosphere's reboots over the years, covering periods of ice, heat, and everything in between. He also focuses on the way humanity has affected the climate in recent years. For the first time in history, climate will be what we make of it, and we're the first species to be aware of our impact. He also explains the history of the first weather forecasts and how the innovation in technology, such as the telegraph, made it possible. For more information or to get your own copy of Revkin's book, visit the links below.

Truckin For Troops Charity- June 17<sup>th</sup>

#### 6-17-18 The Value of Public Libraries

With recent governmental budget cuts, many public services are beginning to suffer. Not least among these are public libraries. While some still consider the work of libraries as outdated and unnecessary, Dr. Timothy Crist, president of the Board of Trustees for The Newark Public Library in New Jersey, and Karin Slaughter, author and founder of Save the Libraries, explain why taking funds away from libraries can result in long-term detriments to the community. Crist argues that libraries are essential because of the work they do in preparing the community for the future. Helping people find jobs, providing Wi-Fi, encouraging family literacy, and much more is part of the everyday responsibilities of many public libraries around the country. The stuffy, quiet library of the past has transformed, in many cases, into a progressive, vibrant resource to help communities in modern society connect to and exchange information. Save the Libraries, Slaughter's organization, strives to provide funding for libraries in underprivileged communities. Slaughter speaks of the impact of libraries on her own life, explaining how the institution provided her with the chance to discover new worlds as child. Even now as a successful author, she uses libraries to access research and history records that are often unavailable anywhere else. She encourages individuals to reach out to their local governments and explain the need for libraries in the community, as well as donating to libraries that need it. Slaughter says that one dollar spent in the library returns five dollars to the community.
