Description: Independence Day is one of the most popular times to break out the grill - with more than 81 million Americans expected to participate in a BBQ this July 4th and nearly \$400 million worth of beef sold in preparation for the holiday, it's critical that consumers take the necessary steps to protect their families from foodborne illness (commonly known as food poisoning). Incidents of food poisoning surge during the summer because harmful bacteria multiply faster when foods heat up in warm temperatures. USDA research shows that 1 out of every 4 hamburgers turns brown before it has reached a safe internal temperature.

Along with advocating more tolerance, more flexibility, and more emphasis on fostering and rewarding positive student behavior, Black calls for courts to re-engage in school discipline, enforce students' rights, and support broader reforms.
