An aeronautical study of the proposed construction described above has been completed under the provisions of Part 77 of the Federal Aviation Regulations. Based on the study it is found that the construction would have no substantial adverse effect on the safe and efficient utilization of

he navigable airspace by aircraft or on the determined that the construction would be constructed the construction would be constructed to the constructed t	e operation of air na- not be a hazard to a	vigation facilities. The ir navigation provide:	erefore, pursuant d the following c	to the authority delegated i onditions are met:	lo me, it is hereby

The proposed structure would be located approximately 5.52 nautical miles northeast of Airlake Airport, Lakevilla, MN. It would exceed the obstruction standards of Federal Aviation Regulations, Part 77, as follows:

Section 77.23(a)(2) by 43.4' - height above airport elevation exceeding 452' within 5.52 nautical miles as applied to Airlake Airport.

Subsequent to circularization, the proponent agreed to reduce the proposed structure to 500'AGL/1455'AMSL. FAR, Part 77, Section 77.23(a)(1), is no longer effected by the proposed structure and it reduces obstruction of Section 77.23(a)(2) to 43.4'. The reduction also eliminates significant adverse effects to VFR traffic between Airlake and Lake Elmo.

The proposal was circularized for public comment by letter dated October 1, 1991. Two letters of objection were received as a result of circularization. Both respondents alluded to conditions that would be hazardous to general and commercial aviation for Minneapolis/St. Paul (MSP), hazardous to general and commercial aviation for Minneapolis/St. Paul (MSP), Airlake and Lake Elmo Airports. Neither respondent provided any supporting documentation to support their allegations.

The proposed structure underlines MSP's terminal control area (TCA) which is controlled by air traffic personnel. Further study disclosed that the proposed structure will not adversely effect the planned runway and instrument approach to Airlake Airport. The proposed site for a new MSP airport is one of several sites being studied; however, there is no ALP on file with the FAA.

Aeronautical study disclosed the proposal would have no effect on any existing or planned instrument flight rules (IFR) operations, procedures, minimum flight altitudes, or air navigation and communication facilities.

Study for visual flight rules (VFR) effect disclosed the proposal would be beyond all known public-use airport traffic pattern airspace areas and at 500 feet above ground level would not penetrate altitudes considered available for VFR enroute operations.

This study included sponsor's letter with assurance of electromagnetic interference (EMI) attenuation dated December 23, 1991.

The cumulative impact resulting from the proposed construction when combined with the impact of other existing or proposed structures, was negligible.

Therefore, it is determined that the proposed structure would ave no substantial adverse effect on the safe and efficient utilization of the navigable airspace by aircraft or on the operation of air navigation facilities and would not be a hazard to air navigation.

This decision is based solely on the foregoing description of the structure, which includes the location, height, ERP, and operating frequency.

Aeronautical Study No. 91-AGL-1379-05

The FAA hereby requests that proper notice be given for any futureconstruction or alteration that would exceed the above described heights, including any increase to the ERP, alteration to the transmitting frequency, and/or addition of any other transmitting devices.

di i de torono de desemblada e

This determination does not include temporary construction equipment such as cranes, derricks, etc., which may be used during the actual construction phase of this proposal. Such equipment which has a height greater than the proposed structure and a height which would exceed the notice standards of Part 77 of the Federal Avration Regulations requires separate notice. If prior notice for temporary construction equipment is required, please complete and return the enclosed FAA Form 7460-1.
