Among the dead are more than 30 children, twice as many as last year at this time. Here you saw first the case of a four year old girl who lost her sight because of the flu. We received doctor juan to explain why this season children are the most vulnerable, and everything there is to know, and do, to protect them.</p> <p>The nightmare of being separated from their loved ones will continue to affect immigrant families at the border. A federal judge declined to restrict the power of immigration authorities to apply that measure in special circumstances. In denying the american civil liberties association's request, the judge argued that this is not a common practice, and ordered that blood samples be taken, in case of doubts about paternity.</p> |

Almost all types of cervical cancer are caused by human papillomavirus, which is why doctors recommend regular screening.</p> <p>The number of foreigners who obtain the so-called "Green Card" decreases. The reduction is only 7.3% from 2016 to 2018. The figure indicates that immigration remains huge, and is equivalent to two legal migrants for every seven born in the united states. However, it would indicate that the policies of the Trump administration are beginning to pay off.</p> <p>The CDC and the FDA confirm that the e coli outbreak is over. 167 people in 27 states were affected by the bacteria in vegetables, which came from Salinas, California.</p> <p>No more arrests in the courts! that's the bill that seeks to prohibit ice agents from arresting undocumented immigrants in New York City courts. Researchers assure that this is a discovery that would help prevent flu propagation.</p> <p>A mosquito that can't transmit dengue fever. It sounds like science fiction, but researchers at the University of California, San Diego, created a genetic modification in these insects, making them unable to incubate the virus. The procedure takes antibodies from a sick person, and uses the mosquitoes themselves to use them on other people. It protects against all four variants of the disease. If implemented on a large scale, it could save hundreds of lives in nations in Asia and latin america.</p> <p>The citizenship and immigration service has already published the list of countries eligible for temporary work visas. There are 84 nations that can receive the benefit either with the "h-2a" visa for field and construction workers; or the "h-2b" visa for employees who require specialized knowledge.</p> |

| IMMIGRATION: BIRTH TOURISM NEW RULES | | | 8:30 am | INTERVIEW 3:00 | New rules come into force to reduce so-called "Birth Tourism". The court voted 5-4. Justices Ruth Bader Ginsburg, Stephen Breyer, Sonia Sotomayor and Elena Kagan said they would have left a lower court ruling in place that blocked enforcement while a legal challenge works its way through the courts. The Department of Homeland Security announced in August that it would expand the definition of "public charge," to be applied to people whose immigration to the United States could be denied because of a concern that they would primarily depend on the government for their income. |

The goal of the restrictions is to reduce youth vaping, which health officials say has reached epidemic levels. The 55-45 vote came nearly six weeks after Trump ordered an airstrike that killed Qassem Soleimani, a top Iranian general who led the Iran Revolutionary Guard Corps' elite Quds force. The strike drew immediate condemnation from Democrats and some Republicans, and it prompted Sen. Tim Kaine (D-Va.) to introduce a War Powers resolution aimed at re-asserting Congress' constitutional authority to declare war.</p> |

Almost a third of all reported cases of measles have complications such as pneumonia, hepatitis and viral meningitis, according to the study, published Monday in the medical journal BMJ Case Reports. The authors describe three cases of adult measles with additional complications as a direct result of the infection. Measles is a highly contagious respiratory viral infection most frequently associated with fever, cough and rash. Since it suppresses the body's immune system, it makes people vulnerable to complications in every organ of the body, the researchers said. Though the disease and its complications are preventable with a vaccine, the researchers said anti-vaccination campaigns have contributed to an increase in cases in children and adults.</p> |
