

STA PURPOSE

We are seeking a temporary exemption from rule 73.1560 "Operating Power and Mode Tolerances" pertaining to AM Stations.

Regrettably, our 10kW transmitter caught fire and was found to be unrepairable in a timely manner.

At that point we ordered a replacement 10kW transmitter from Broadcast Electronics.

The Broadcast Electronics 10kW transmitter is currently in the build and test process.

It is expected to ship to our location no later than Friday, March 22, 2024.

With the expected shipping and installation time, we will be back to 100% "daytime" power no later than April 30, 2024.

During this time, we continue to run at our allotted overnight power, and are only running at reduced power during daytime hours.
